

Stress-Free Protection from HIV

When taken daily, PrEP reduces the risk of getting HIV from sex by about 99%.* PrEP is for HIV-negative people of any gender or sexual orientation at risk of contracting HIV through sex or drug use. Nurx makes it easy to get and stay on PrEP from the comfort of your home with virtual care and testing costs fully covered by your employer.**

How PrEP Treatment Through Nurx Works:

Getting started

See if PrEP is right for you by learning more on your custom Nurx care pathway.

Consult with a sexual health clinician

Share your health history through the secure Nurx website or app. A Nurx medical provider will review and send a PrEP test kit to your home.**

Self-test at home

Complete your tests at home and return your samples to the Nurx partner lab in a prepaid envelope.**

Personalized clinical review

Once your test results are in, one of our licensed medical providers will review the results to make sure PrEP is a good fit for you. If you test positive for any STIs, they can prescribe treatment or connect you with care.

Treatment plan

Following a clinical review, you will be prescribed a 3-month supply of PrEP medication (if deemed appropriate). Self-test at home every three months for peace of mind and to continue receiving PrEP.
